How to connect 2 tvs to one satellite dish

Satellite television is a terrific way to get the channels you want at a price you can afford. But what do you do if your satellite goes out of alignment? A poorly aligned dish can affect your signal. You can adjust your satellite dish yourself, and here's how. Perform a Signal Test FirstIt's possible that you may not need to adjust your satellite dish. Before you climb up on a ladder or roof to get to your dish, run a signal test. Power cycle your satellite receiver. Then go into the settings menu on the receiver. You should be able to find options to view your signal strength and check signal meters. Run the signal test to see if the issue is your satellite dish or some other factor. The signal test may explain or fix your issues and save you the trouble. Gather the Tools You NeedIf the signal test was unable to diagnose the issue, or if you're certain that the dish is misaligned, be sure to gather everything you need before you begin to adjust your satellite dish. You'll need a ladder, of course, and you'll want to make sure you have a level spot on which to put it before you climb up. Make sure you have a level and a compass, as well as the proper size wrench to adjust bolts. Most satellite dishes have bolts that are either 7/16 or 1/2 inch in size, so grab both size wrenches just in case. You'll also want to have someone inside watching the screen so that he or she can tell you when the signal is right. Be SafeIt's extremely important to ensure that you are completely safe before you attempt to adjust your satellite dish. Make sure you can place your ladder on a level spot, and have someone hold the ladder for you as you climb up and down. Use safety equipment, and make sure that you're secure as you work. If you feel unsafe in any way, stop and call a professional to do the work. Adjust the Azimuth of the DishAzimuth refers to the rotation of the satellite dish along its mast, the pole that extends upward. Make sure the mast is level first; use a level to ensure that it's perpendicular to the ground. Use a compass to determine which way is west — you can use your smartphone — and adjust the satellite from east to west. Watch the signal meter or have someone watch it for you to determine the highest signal strength along the azimuth. Adjust the Elevation of the DishThe elevation of the dish determines the angle where the dish points to the satellite along the horizon. Make sure the signal meter screen is up on your receiver, and have someone watch the signal strength as you adjust it if you can't see it yourself from where you are. Loosen the bolt and nut, and move the angle of the satellite dish until the signal is at its highest strength. Then, tighten the bolt and nut to secure the dish at its elevation. MORE FROM QUESTIONSANSWERED.NET Thanks to modern technology, 2 TVs can show from one satellite dish Technologies in our time allow a person a lot of opportunities. Not so long ago the presence of a TV in our house that showed several channels was considered an achievement. Nowadays the TV can show hundreds of channels, but this is not enough. Many users are willing to install two TVs at once, which receive satellite signals and produce a high-quality image. Satellite TV for 2 TVs: which option is unacceptable Buying and installing at home a set of satellite TV, few people know that this set is designed for one TV. And since the tastes of residents do not coincide during the viewing of programs, films, many have two or even three TV sets. And in this case, the owners of several televisions have a question about the problem of connecting this technique to one antenna and dividing the signal between them. Before buying a satellite dish, it is worth consulting with the seller about the possibility of connecting to two TVs There are two options with the help of which you can watch TV at the same time as another: Connection with 2 receivers; And with the help of the HF module. There is a very simple way to connect one satellite dish to two TVs, but this method is not very popular with anyone. This method consists in using one receiver. In this method, the first device is connected to the first TV through the tulips, and three times the device, that is, the RF module is connected to the second output to the tuner, which allows you to connect other monitors. But, unfortunately, such a connection has a huge number of shortcomings. Channel management can only be in the room where the tuner is located. And while 2 TVs show the same channels. The image quality also decreases. Scheme of connecting a satellite dish to 2 TVs There is a variant of connecting 2 TV sets with a splitter or splitter that divides the antenna signal into 2 TV sets. For this work, modern equipment is used and for this reason we will not need a soldering iron, tin or rosin. In these samples of branching, screw jacks are used. Insert the stripped end into the nut, and connect the second one with the same plug to the TV. The central antenna cable is inserted into the special hole of the screw socket of the splitter, and the nut is wrapped and the copper cable sheath firmly pressed against the body of the device. Before the work is disconnected from the network device, until the final connection. The scheme of connecting a satellite dish to two TV sets may differ slightly depending on the model chosen Connection instructions, step by step: We buy a special cable, as much as necessary, a length of at least 12 meters, the correct choice of cable depends on the quality of the image, and a splitter with two outputs; If the satellite dish is already connected to one of the TVs, then insert this end into the output port on the splitter and clamp the nut; Next cut off not a big piece of cable from the skein and put on it the ends of the standard plug (the so-called head) and squeeze them; The same crimping is performed on the remaining length of the cable, it will enable to connect the signal splitter and TV in another room; Push the plug into the appropriate connectors on the splitter case and connect it to the TV; A piece that goes into another room is hidden under the baseboard so as not to step on it; In order to shorten the length of this cable, you can drill a hole in the wall between the rooms. After connecting the antenna to 2m TVs, we check the image quality and if it is distorted or intermittent, then we check the connection or remake the crimp. How to connect 2 TVs to one tuner For successful connection of 2 TV sets to one satellite, you need to have the right tool. Namely: The easiest tool for stripping the cable; Satellite dish or standard antenna; Tuner; Splitter or splitter on 2 outputs; 2 TV sets; A set of necessary cables. If one TV is located, for example, in the living room, and the second in the other room, then the connection is done by the near TV with the receiver and the cable purchased. We turn on the TV in the hall and start adjusting. The tuner has special connectors for connecting two TVs We perform the following actions: Press the menu button; Determine and mark the desired source for the signal; In the found source, note the connector to which the TV is connected; We search for programs; After the search is over, we remove channels from the list with a poor-quality image. Now tell you how to connect the 2nd TV to the tuner. We measure the minimum distance from the TV to the TV. We conduct the cable along the plinth, in order not to affect it when walking through the rooms. Next, we take a high-frequency or ordinary TV-type cable that connects to the output on the rear panel of the tuner, the other end to the antenna input that is on the TV. After connecting, you only need to set up your TV. Optimum connection of two TVs to one satellite dish In order to properly connect 2 TVs to one satellite and enable you to view different channels on these TVs, you must connect to each of them via your own tuner. After getting a signal on the tuner, the signal can be divided as convenient for you and view your favorite channels without interfering with the other inhabitant of the house. To connect two TVs to one satellite antenna, you can use special adapters All channels are switched on the tuner - this makes it possible to watch different channels on two TVs simultaneously. Do not connect such a connection cheap, but there is no such way. In each of the rooms a separate device is installed. The connection is made in a chain. When connected through a chain, all devices are connected to the output port. How to install a satellite dish on 2 TVs (video) After you read our article, you realized that there are many options for connecting. Each of them has not only its own peculiarities, but also certain difficulties. Proceeding from this, it can be said that to someone it will be easier to take their free time and cope with the task independently, and someone will decide to spend money and contact the masters. In either case, both options have the right to exist.
